Legal help for Mexico: cited, verifiable, sovereign.

A legal AI platform for citizens and law firms, powered by our own LLM trained on Mexican law.

THE PROBLEM

Justice in Mexico is a luxury good

Every Mexican faces legal moments — rent hikes, wrongful dismissal, unauthorized charges, custody. Almost nobody knows what the law actually says for them, and lawyers are priced for companies, not people.

130M

People under Mexican law

Federal system + 32 state systems. Consumer, labor, family and civil matters touch every household.

Weeks

To learn what applies to you

Laws are public but unreadable: technical language, scattered sources, thousands of pages per code.

$$$

First consultation

General AI chatbots answer confidently — and invent articles. In law, a hallucinated citation is worse than no answer.

THE SOLUTION

One platform, two sides of the same law

Para ti — citizens, free

Chat with Izel in plain language. She builds your case file with you, finds the exact law that protects you, and hands you next steps — every answer cited against the official text.

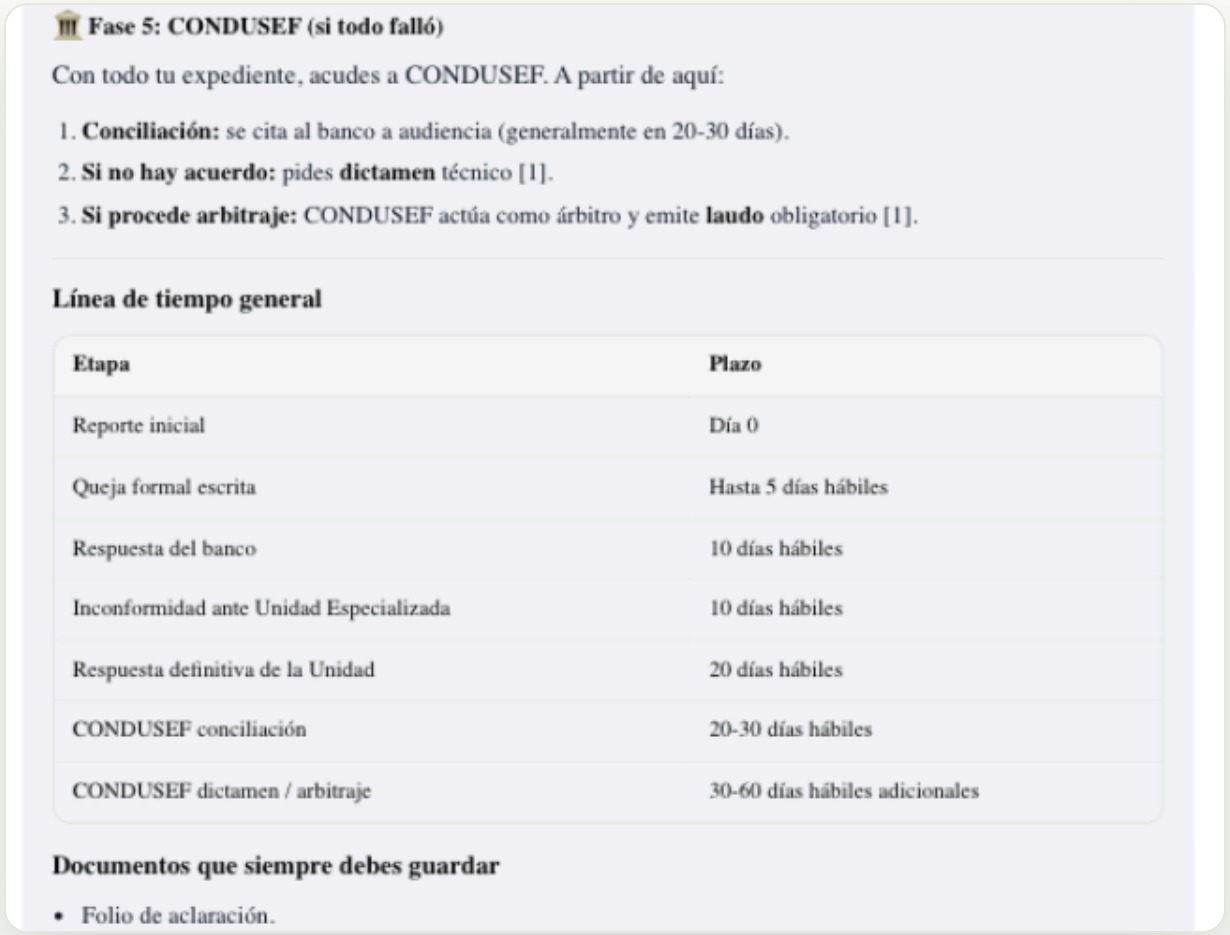

Studio — law firms

A collaborative workspace: cases, document vault with version history, deadlines, and Izel as a firm member — reading your files, drafting, executing actions.

PRODUCT

Answers like a lawyer, cites like a judge

🏛️ **Fase 5: CONDUSEF (si todo falló)**

Con todo tu expediente, acudes a CONDUSEF. A partir de aquí:

1. **Conciliación:** se cita al banco a audiencia (generalmente en 20-30 días).
2. **Si no hay acuerdo:** pides **dictamen** técnico [1].
3. **Si procede arbitraje:** CONDUSEF actúa como árbitro y emite **laudo** obligatorio [1].

Línea de tiempo general

Etapa	Plazo
Reporte inicial	Día 0
Queja formal escrita	Hasta 5 días hábiles
Respuesta del banco	10 días hábiles
Inconformidad ante Unidad Especializada	10 días hábiles
Respuesta definitiva de la Unidad	20 días hábiles
CONDUSEF conciliación	20-30 días hábiles
CONDUSEF dictamen / arbitraje	30-60 días hábiles adicionales

Documentos que siempre debes guardar

- Folio de aclaración.

Verified references card

Every response carries a references card: law, article number, and the official fragment — expandable, exportable to PDF.

A librarian subagent

While Izel talks, a second agent searches the corpus inside the identified law and returns the exact articles. No invented citations.

Real procedure, real timelines

Concrete phases, deadlines and documents to keep — the difference between knowing a right and exercising it.

THE DIFFERENTIATOR

Our own sovereign LLM, trained on Mexican law

Global models were trained on U.S. law and translate poorly. We are building Tlamatini — a Mexican legal model trained on the official corpus we harvest daily. Nothing like it exists in the country.

300+

Federal laws ingested

LeyesBiblio, DOF, SJF — harvested and updated automatically, in production today.

10.6M

Indexed text chunks

Article-level retrieval over the full corpus, served to citizens and firms right now.

32

States, in progress

State codes and gazettes under collection — the long tail no global model will ever cover.

B+

Tokens for training

Continued pre-training of an open-weight model — sovereign, ownable, exportable on-premise.

HOW IT WORKS

Two agents, one verifiable answer

Izel — conversation

Listens with empathy, asks the right questions, builds the case file. Streams in seconds, speaks and listens (voice in/out).

→

Bibliotecario — retrieval

Identifies the applicable law, searches *inside* the law with phrase-aware ranking, returns exact articles while Izel is still answering.

→

Verified citation

The answer cites law + article, backed by the official fragment. Users expand, export and share the sources.

18+ agentic tools

Document review & versioning

Deadlines & case timeline

Voice (TTS / STT)

Sharing with granular grants

TRUST BY DESIGN

Built for the standard law requires

Anonymous by default

Citizens consult without giving a name. A recovery phrase — not an identity — owns the case file. LFPDPPP consent, revocable.

Ownership & granular access

Files always belong to the citizen. Sharing works through revocable grants with roles — never through copies.

Ethical wall for firms

Conflicts of interest are enforced at the database: a firm member walled out of a case cannot see it exists.

Sovereign deployment

The full stack — app, files, model — runs on our infrastructure today and can run inside a firm's own servers tomorrow.

BUSINESS MODEL

Free to citizens. Paid where value lands

Consumers (B2C funnel)

$0
Unlimited guidance acquisition engine

$100 MXN
Lawyer validation of their case

$250 MXN
Monthly accompaniment

Law firms (B2B SaaS)

Per-seat subscription to the Studio workspace — cases, vault, deadlines, Izel as a firm member.

On-prem sovereign license for firms and institutions that cannot leave their files: stack + model, inside their walls.

Citizens arrive free and stay as paying cases; firms pay for the workspace and keep paying for the model underneath it.

MARKET

Every Mexican is a legal subject

Consumer, labor, family, housing — legal need is universal and recurring, and the supply side (quality, affordable guidance) barely exists. Law firms, from solos to the largest despachos, still run on paper and WhatsApp.

B2C

Every adult in Mexico

First structurally affordable legal guidance, monetized at the moment of real need.

B2B

Tens of thousands of firms

Solos, boutiques and despachos digitizing case management with an AI member that already knows Mexican law.

B2G+

Institutions & govtech

Sovereign deployment for agencies, universities and legaltech — the model is theirs to run.

WHERE WE ARE

Live today. Training the model next month

Now — private beta

Platform live at aijusticia.mx: citizen chat with verified citations, firm Studio, documents, deadlines, invitations, voice — in daily use by a pilot firm.

Next — Tlamatini v1

Continued pre-training of our open-weight legal model on the harvested corpus (billions of tokens). Embeddings over 10.6M chunks to sharpen retrieval.

Then — the republic

All 32 state corpora online, voice-first mobile experience, and sovereign on-prem deployments for firms and institutions.

Built by people who refuse to wait for the system.

Fabian Romero — founder & engineer, designed and shipped the full platform end to end: product, retrieval, security, infrastructure and the training pipeline. Backed by a founding team driving legal operations and the pilot firms.
